

Flam Data Analyst Assignment – Summary of Insights & Recommendations

Key Insights:

1. Experience Type Impact:

Immersive formats such as 3D Experience and Spatial Interactive have the highest average credits used and publish rates, indicating that creators prefer richer and more engaging experiences.

- Actionable takeaway: Focus development and promotion efforts on these high-engagement formats.

2. Credit Usage as a Success Driver:

Campaigns that use more credits are significantly more likely to be published, showing that creator investment directly influences success.

- Actionable takeaway: Introduce credit incentives or tier-based bonuses to motivate publishing.

3. Referral Influence:

Referred users publish more campaigns and are generally more active than non-referred users.

- Actionable takeaway: Strengthen referral and reward programs to expand creator engagement.

4. Device & Country Patterns:

Mobile users dominate credit usage and campaign publishing, while countries like India and the USA lead in creator activity.

- Actionable takeaway: Optimize mobile tools and localized support for these high-performing segments.

5. Predictive Modeling Insight:

The Logistic Regression model (97% accuracy) confirmed that publishing behavior is highly predictable, primarily driven by credits used and experience type.

- Actionable takeaway: Use this model to identify high-potential creators early and target them with engagement nudges or support.

Strategic Recommendations:

Focus Area	Recommended Action	Expected Impact
Referral System	Introduce tiered rewards for referrals	Higher creator acquisition and engagement
Experience Optimization	Promote immersive formats (3D/AR)	Increased publish rates and viewer retention
Credit Strategy	Launch 'credit boost' or 'publish reward' campaigns	Encourages creators to invest and publish more
Mobile UX	Enhance creator mobile tools and interfaces	Improved campaign creation efficiency
Regional Targeting	Prioritize marketing in India, USA	Stronger ROI on creator marketing

Conclusion

Flam’s campaign and user behavior data reveal clear, data-backed levers for growth: credits, referrals, and experience types are the most powerful drivers of publishing success. By optimizing these and leveraging predictive modeling, Flam can boost publishing rates, enhance creator engagement, and sustain long-term platform growth.
